Product Description

304 316L Stainless Steel Sheet is the most popular and economical of the stainless steels.

Stainless steel sheets, also commonly known as Cold Rolled Products, can be moulded into shapes for making cookware, such as grills, sinks, pots and cookers. Stainless steel sheet is popular as a finish for refrigerators, freezers, countertops and dishwashers.

The more ductile grades are used to make grills, cookers, saucepans, and sinks. Stainless steel can also be used to finish freezers, dishwashers, refrigerators, and countertops. In food production, stainless steel is ideal because it doesn't affect the flavour of the food.
